Momentum - Implemented Features Summary

One-page overview of the current Flutter build for the MSc habit-building fitness app. The app is local-first, mobile-focused, and includes onboarding, habit tracking, analytics, account flows, and branded UI polish.

1. Entry & Identity

- Sign in / create account screen with Momentum branding
- Fade-in launch splash using the app logo
- 5-question onboarding flow before entering the app
- Account details screen with gender, DOB, start date, password change, and logout

2. Habits & Logging

- Create, edit, delete, and categorize habits
- Step, workout, water, sleep, mindfulness, and custom habit support
- Manual progress logging with quick actions and detail controls
- Swipe-to-delete interaction on habit cards

3. Progress & Insights

- Animated home dashboard with progress and streak feedback
- Stats screen with weekly completion summary and motivation
- Insights tab with pattern summary, cue/time window, consistency trend, automaticity score, and adaptive goal history
- Behavior Lab screen for cue-first research-style insights

4. Reminders, Health & Privacy

- Reminder setup UI with permission state, timing, and test reminder placeholder
- Health sync placeholder flow for Health Connect / Apple Health
- Privacy & Data screen explaining backend auth vs on-device habit data
- CSV export of local progress and adaptive history

5. Visual & Technical Foundation

- Custom Momentum theme with shared typography, spacing, elevation, and motion tokens
- Premium bottom navigation, branded sign-in flow, splash branding, and account UI
- Adaptive light/dark support and local persistence through shared preferences plus local data services
- Animated rings, cards, empty states, and transitions ready for demo evidence

Current build status: ready for screenshots, demo walkthroughs, and next-step expansion into real notifications, live health sync, and backend-connected account services.
